Writing Half Equations

A half equation is a chemical equation that shows how one species - either the oxidising agent or the reducing agent - behaves in a redox reaction. If you add two half equations together, you get a redox equation.

Step 1: Determine the oxidation states on each side of the equation.

Step 2: Balance the element changing oxidation state.

Step 3: Sort out electrons. If the oxidation state becomes more negative, then it gains electrons. If the oxidation state becomes more positive, then electrons are lost.

Step 4: Sort out Os. For every O gained/lost, add/remove one H₂O molecule.

Step 5: Sort out Hs. For every H gained/lost, add/remove one H⁺ ion.

Example 1: BrO₃⁻ → Br₂

	$\text{BrO}_3^- \longrightarrow \text{Br}_2$						
Step 1: Determine the oxidation states on each side of the equation	<table style="margin: auto; border: none;"> <tr> <td style="padding: 0 10px;">+5</td> <td style="padding: 0 10px;">→</td> <td style="padding: 0 10px;">0</td> </tr> </table>	+5	→	0			
+5	→	0					
Step 2: Balance the element changing oxidation state	<table style="margin: auto; border: none;"> <tr> <td style="padding: 0 10px;">2BrO_3^-</td> <td style="padding: 0 10px;">→</td> <td style="padding: 0 10px;">Br_2</td> </tr> <tr> <td colspan="3" style="text-align: center; padding: 5px 0;">2 Br on right so need 2 BrO₃⁻ to left</td> </tr> </table>	2BrO_3^-	→	Br_2	2 Br on right so need 2 BrO ₃ ⁻ to left		
2BrO_3^-	→	Br_2					
2 Br on right so need 2 BrO ₃ ⁻ to left							
Step 3: Sort out electrons.	<table style="margin: auto; border: none;"> <tr> <td style="padding: 0 10px;">$2\text{BrO}_3^- + 10e^-$</td> <td style="padding: 0 10px;">→</td> <td style="padding: 0 10px;">Br_2</td> </tr> <tr> <td colspan="3" style="text-align: center; padding: 5px 0;">2x Br become 5 more negative so 10 electrons gained</td> </tr> </table>	$2\text{BrO}_3^- + 10e^-$	→	Br_2	2x Br become 5 more negative so 10 electrons gained		
$2\text{BrO}_3^- + 10e^-$	→	Br_2					
2x Br become 5 more negative so 10 electrons gained							
Step 4: Sort of the Os	<table style="margin: auto; border: none;"> <tr> <td style="padding: 0 10px;">$2\text{BrO}_3^- + 10e^-$</td> <td style="padding: 0 10px;">→</td> <td style="padding: 0 10px;">$\text{Br}_2 + 6\text{H}_2\text{O}$</td> </tr> <tr> <td colspan="3" style="text-align: center; padding: 5px 0;">6 more O on left so need 6 H₂O on the right</td> </tr> </table>	$2\text{BrO}_3^- + 10e^-$	→	$\text{Br}_2 + 6\text{H}_2\text{O}$	6 more O on left so need 6 H ₂ O on the right		
$2\text{BrO}_3^- + 10e^-$	→	$\text{Br}_2 + 6\text{H}_2\text{O}$					
6 more O on left so need 6 H ₂ O on the right							
Step 5: Sort out Hs	<table style="margin: auto; border: none;"> <tr> <td style="padding: 0 10px;">$2\text{BrO}_3^- + 12\text{H}^+ + 10e^-$</td> <td style="padding: 0 10px;">→</td> <td style="padding: 0 10px;">$\text{Br}_2 + 6\text{H}_2\text{O}$</td> </tr> <tr> <td colspan="3" style="text-align: center; padding: 5px 0;">12 less H on left so add 12 H⁺ to left</td> </tr> </table>	$2\text{BrO}_3^- + 12\text{H}^+ + 10e^-$	→	$\text{Br}_2 + 6\text{H}_2\text{O}$	12 less H on left so add 12 H ⁺ to left		
$2\text{BrO}_3^- + 12\text{H}^+ + 10e^-$	→	$\text{Br}_2 + 6\text{H}_2\text{O}$					
12 less H on left so add 12 H ⁺ to left							
Balanced Half Equation	<table style="margin: auto; border: none;"> <tr> <td style="padding: 0 10px;">$2\text{BrO}_3^- + 12\text{H}^+ + 10e^-$</td> <td style="padding: 0 10px;">→</td> <td style="padding: 0 10px;">$\text{Br}_2 + 6\text{H}_2\text{O}$</td> </tr> </table>	$2\text{BrO}_3^- + 12\text{H}^+ + 10e^-$	→	$\text{Br}_2 + 6\text{H}_2\text{O}$			
$2\text{BrO}_3^- + 12\text{H}^+ + 10e^-$	→	$\text{Br}_2 + 6\text{H}_2\text{O}$					

Example 2: VO²⁺ → VO₂⁺

Step 1: Determine the oxidation states on each side of the equation	+4	→	+5
Step 2: Balance the element changing oxidation state	VO^{2+}	→	VO_2^+
	V becomes 1 more positive so 1 electron lost		
Step 3: Sort out electrons.	VO^{2+}	→	$\text{VO}_2^+ + \text{e}^-$
	V becomes 1 more positive so 1 electron		
Step 4: Sort of the Os	$\text{VO}^{2+} + \text{H}_2\text{O}$	→	$\text{VO}_2^+ + \text{e}^-$
	1 less O on left so add 1 H ₂ O on the left		
Step 5: Sort out Hs	$\text{VO}^{2+} + \text{H}_2\text{O}$	→	$\text{VO}_2^+ + 2\text{H}^+ + \text{e}^-$
	2 less H on right so add 2 H ⁺ to right		
Balanced Half Equation	$\text{VO}^{2+} + \text{H}_2\text{O}$	→	$\text{VO}_2^+ + 2\text{H}^+ + \text{e}^-$

Practice Problems

- $\text{Na} \rightarrow \text{Na}^+$
- $\text{Pb}^{4+} \rightarrow \text{Pb}^{2+}$
- $\text{H}_2 \rightarrow \text{H}^+$
- $\text{Br}^- \rightarrow \text{Br}_2$
- $\text{Cr}_2\text{O}_7^{2-} \rightarrow \text{Cr}^{3+}$
- $\text{SO}_4^{2-} \rightarrow \text{S}$
- $\text{SO}_4^{2-} \rightarrow \text{H}_2\text{S}$
- $\text{SO}_4^{2-} \rightarrow \text{SO}_2$
- $\text{N}_2 \rightarrow \text{NO}_3^-$
- $\text{IO}_3^- \rightarrow \text{I}_2$
- $\text{Hg}^{2+} \rightarrow \text{Hg}_2^{2+}$
- $\text{S}_2\text{O}_3^{2-} \rightarrow \text{S}$
- $\text{NO}_3^- \rightarrow \text{NO}_2^-$
