# **POLYMERS**

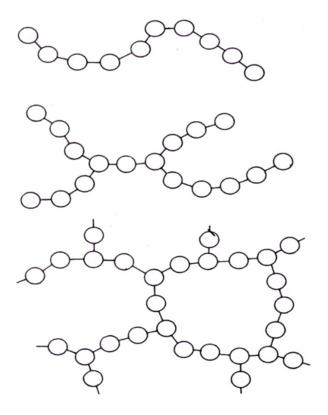

# VISUAL CHEM CARDS

www.chemtextbook.com

During polymerisation large numbers of **monomers** become connected by covalent bonds to for a single long molecule – a polymer.

**Polymers** typically consist of 10,000-20,0000 monomers.

Linear polymer

Branched polymer

Cross-linked polymer

### **Addition Polymers**

alkene (unsaturated)

polyalkene (saturated)

MONOMER

**POLYMER** 

Monomers are joined together by C-C bonds formed by the sharing of C=C  $\pi$  electrons to form long chains (polymers).

#### **Common Addition Polymers**

Name(s)	Formula	Monomer	Uses
Polyethene	-(CH <sub>2</sub> -CH <sub>2</sub> ) <sub>n</sub> -	ethene CH <sub>2</sub> =CH <sub>2</sub>	film wrap, plastic bags
Polypropropene	-[CH <sub>2</sub> -CH(CH <sub>3</sub> )] <sub>n</sub> -	propene CH <sub>2</sub> =CHCH <sub>3</sub>	carpet, upholstery
Poly(vinyl chloride) (PVC)	-(CH <sub>2</sub> -CHCl) <sub>n</sub> -	chloroethene CH₂=CHCl (vinyl chloride)	pipes, bottles, flooring
<b>Polystyrene</b> (PS)	−[CH <sub>2</sub> -CH(C <sub>6</sub> H <sub>5</sub> )] <sub>n</sub> −	phenylethene CH₂=CHC <sub>6</sub> H₅ (styrene)	toys, cabinets packaging (foamed)
<b>Polyacrylonitrile</b> (PAN, Orlon, Acrilan)	−(CH <sub>2</sub> -CHCN) <sub>n</sub> −	prop-2-enenitrile CH <sub>2</sub> =CHCN (acrylonitrile)	rugs, blankets clothing
Polytetrafluoroethene (PTFE, Teflon)	-(CF <sub>2</sub> -CF <sub>2</sub> ) <sub>n</sub> -	tetrafluoroethene CF <sub>2</sub> =CF <sub>2</sub>	non-stick surfaces

#### **Formation of Addition Polymers**

$$R-O-O-R \rightarrow 2R-O \bullet$$

$$R-O-\stackrel{\downarrow}{C}=\stackrel{\downarrow}{C} \rightarrow R-O-\stackrel{\downarrow}{C}-\stackrel{\downarrow}{C} \bullet$$

Initiation step

Propagation step

$$\begin{array}{c} R-O-\dot{\varsigma}-\dot{\varsigma}\left(\dot{\varsigma}-\dot{\varsigma}\right)\dot{\varsigma}-\dot{\varsigma}\stackrel{\bullet}{\leftarrow} \stackrel{\bullet}{\leftarrow} \dot{\varsigma}-\dot{\varsigma}\left(\dot{\varsigma}-\dot{\varsigma}\right)\dot{\varsigma}-\dot{\varsigma}-O-R \\ I \\ R-O-\dot{\varsigma}-\dot{\varsigma}\left(\dot{\varsigma}-\dot{\varsigma}\right)\dot{\varsigma}-\dot{\varsigma}-\dot{\varsigma}-\dot{\varsigma}-\dot{\varsigma}\left(\dot{\varsigma}-\dot{\varsigma}\right)\dot{\varsigma}-\dot{\varsigma}-O-R \end{array}$$

Termination step

#### **Three Step Process**

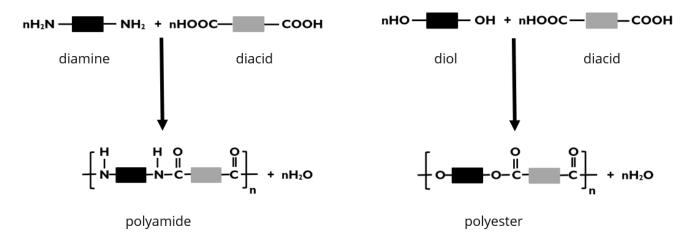

**Initiation step**: formation of free radicals from an initiator (e.g. ROOR) by treatment with heat or light.

**Propagation step:** chain growth through the interaction of free radicals combine with monomer

**Termination step:** occurs when two free radicals combine.

**Free Radical:** an atom, molecule, or ion that has an unpaired valence electron.

## **Condensation Polymers**

### **Some Everyday Condensation Polymers**

Туре	Formula	Monomers Components	Uses
polyester	$\sim$ [CO(CH <sub>2</sub> ) <sub>4</sub> CO-OCH <sub>2</sub> CH <sub>2</sub> O] <sub>n</sub> $\sim$	HOOC-(CH <sub>2</sub> ) <sub>4</sub> -COOH HO-CH <sub>2</sub> CH <sub>2</sub> -OH	fabrics
polyester PET	0-(CH <sub>2</sub> ) <sub>2</sub> -0 <sub>77</sub>	HOOC-C <sub>6</sub> H <sub>4</sub> -COOH HO-CH <sub>2</sub> CH <sub>2</sub> -OH	water bottles packaging
polyamide Nylon 66	~[CO(CH <sub>2</sub> ) <sub>4</sub> CO-NH(CH <sub>2</sub> ) <sub>6</sub> NH] <sub>n</sub> ~	HOOC-(CH <sub>2</sub> ) <sub>4</sub> -COOH H <sub>2</sub> N-(CH <sub>2</sub> ) <sub>6</sub> -NH <sub>2</sub>	fibres for textiles and carpets and molded parts
<b>polyamide</b> Kevlar	N-N-N-N-N-N-N-N-N-N-N-N-N-N-N-N-N-N-N-	HOOC-C <sub>6</sub> H <sub>4</sub> -COOH H <sub>2</sub> N-C <sub>6</sub> H <sub>4</sub> -NH <sub>2</sub>	personal armour /protection musical instruments
polyurethane Lycra Spandex	CH <sub>3</sub> O N N O (CH <sub>2</sub> ) <sub>2</sub> -O <sub>7</sub>	HOCH <sub>2</sub> CH <sub>2</sub> OH  H <sub>3</sub> C  N C O	clothing home furnishings
