## Calculating Empirical \& Molecular Formula

Chemical formula spells out the composition of chemical compounds and even the way in which the atoms are arranged using a single line of chemical element symbols, numbers, and other symbols, such as dashes, commas, brackets, and plus (+) and minus $(-)$ signs. There are several types of chemical formula. These include empirical formula, molecular (or true) formulas, and structural formulas.

Molecular formulas have relative formula masses that are whole-number multiples ( n ) of the corresponding empirical relative formula mass. Chemical compounds with the empirical formula $\mathrm{CH}_{2} \mathrm{O}$ (relative formula mass $=30$ ) will have a relative formula mass which is a multiple of 30 , ie $\mathrm{C}_{2} \mathrm{H}_{4} \mathrm{O}_{2}(\mathrm{RFM}=60), \mathrm{C}_{2} \mathrm{H}_{6} \mathrm{O}_{3}(\mathrm{RFM}=90), \mathrm{C}_{10} \mathrm{H}_{20} \mathrm{O}_{10}(\mathrm{RFM}=300)$.

## Empirical Formula from Molecular Formula, $X_{a} Y_{b} Z_{c}$

Step 1: Write down the subscripts, ie a, b, c;
Step 2: Identify the largest number that divides into $\mathrm{a}, \mathrm{b}$ and c ;
Step 3: Divide all subscripts by the number identified in step 2;

Step 4: Write down the empirical formula.
Example: What is the empirical formula of $\mathrm{C}_{6} \mathrm{H}_{12} \mathrm{O}_{6}$ ?

| Step 1 | Write down chemical formula subscripts | $6,12,6$ |
| :--- | :--- | :--- |
| Step 2 <br> Step 3 | Identify the largest common factor <br> Divide subscripts by the largest <br> common factor | 6 |
| Step 4 | Write down the empirical formula | $\mathrm{C}_{6 / 6} \mathrm{H}_{12 / 6} \mathrm{NO}_{6 / 6}$ |

Example: What is the empirical formula of $\mathrm{C}_{8} \mathrm{H}_{10} \mathrm{~N}_{4} \mathrm{O}_{2}$ ?

| Step 1 | Write down chemical formula subscripts | $8,10,4,2$ |
| :--- | :--- | :--- |
| Step 2 <br> Step 3 | Identify the largest common factor <br> Divide subscripts by the largest <br> common factor | 2 |
| Step 4 | Write down the empirical formula | $\mathrm{C}_{8 / 2} \mathrm{H}_{10 / 2} \mathrm{~N}_{4 / 2} \mathrm{O}_{2 / 2}$ |

## Empirical Formula from \% Composition

To calculate empirical formula from percentage compositions of a compound use the calculating frame given below:

Step 1: Write the names or symbols of the elements;
Step 2: For each elementgive its \% composition;
Step 3: Using the Periodic Table find the $A_{r}$ value for each element;
Step 4: Divide the \% value for each element by its $A_{r}$;

Step 5: Divide throughout by the smallest value;
Step 6: Write down the empirical formula.
The action at Step 5 usually gives you the simplest whole number ratio straightaway. Sometimes it does not, so you might get 1 and 1.5. In this example, you would multiply both numbers by 2 , giving 2 and 3 (instead of rounding 1.5 up to 2 ).

| Step 1 |  | Element X | Element Y | Element Z |
| :---: | :---: | :---: | :---: | :---: |
| Step 2 | \% composition | X | y | z |
| Step 3 | Relative atomic mass, $\mathrm{A}_{r}$ | $\mathrm{A}_{[ }[\mathrm{X}]$ | $\mathrm{A}_{[ }[\mathrm{Y}]$ | $\mathrm{A}_{[ }[\mathrm{Z}]$ |
| Step 4 | \% composition/Ar $\times 100$ | x/Ar $[\mathrm{X}] \times 100$ | $\mathrm{y} / \mathrm{A}_{\mathrm{r}}[\mathrm{Y}] \times 100$ | z/Ar[Z] x 100 |
| Step 5 | Divide by smallest number from Step 4 | Step 4 answer/ Smallest no. Step 4 = a | Step 4 answer/ Smallest no. Step 4 = b | Step 4 answer/ Smallest no. Step 4 = c |
| Step 6 | Empirical Formula | $\mathrm{Xa}_{\mathrm{a}} \mathrm{YbZ}_{c}$ |  |  |

Example: What is the empirical formula of the nitrogen oxide that has $30.4 \%$ by mass nitrogen and $69.6 \%$ by mass oxygen?

## Answer:

| Step 1 |  | N | 0 |
| :---: | :---: | :---: | :---: |
| Step 2 | \% composition | 30.4 | 69.6 |
| Step 3 | $\mathrm{A}_{r}$ | 14 | 16 |
| Step 4 | \% composition/Ar | 30.4/14 = 2.17 | 69.6/16 = 4.35 |
| Step 5 | Divide by small number from step 4 | $2.17 / 2.17=1$ | 4.35/2.17 = 2 |
| Step 6 | Empirical Formula: | $\mathrm{N}_{2} \mathrm{O}$ |  |

Empirical Formula: $\mathrm{N}_{2} \mathrm{O}$

Example: What is the empirical formula of a compound was found to contain 32.65\% sulfur, 65.3\% oxygen and 2.04\% hydrogen?

## Answer:

| Step 3 | $\mathrm{A}_{\mathrm{r}}$ | 32 | 16 | 1 |
| :--- | :--- | :---: | :---: | :---: |
| Step 4 | \% composition/A | $32.65 / 32=1.02$ | $65.3 / 16=4.08$ | $2.01 / 1=2.01$ |
| Step 5 | Divide by small number <br> from step 4 | $1.02 / 1.02=1$ | $4.08 / 1.02=4$ | $2.01 / 1.02=2$ |
| Step 6 | Empirical Formula | $\mathrm{SO}_{4} \mathrm{H}_{2}$ |  |  |

## Empirical formula: $\mathrm{H}_{2} \mathrm{SO}_{4}$

## Empirical Formula from Elemental Masses (XYZ)

If you are given the elemental composition of an unknown substance in grams, you will need to proceed according to the following instructions.

Example: Find the empirical formula of an unknown substance made from $p$ grams of element $X$, $q$ grams of element $Y$ and $r$ grams of element $Z$.

Step 1: Write the names or symbols of the elements;
Step 2: Determine total mass of unknown substance, i.e. $p+q+r$ grams
Step 3: For each element calculate its \% composition, i.e. $p /(p+q+r) \times 100$
Step 4: Using the Periodic Table find the $A_{r}$ value for each element;
Step 5: Divide the \% value for each element calculated in Step 3 by its $A_{r}$;

Step 6: Divide throughout by the smallest value calculated in Step 5;
Step 7: Write down the empirical formula.

| Step 1 |  | X | Y | Z | Total |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Step 2 | Mass | n | p | q | $x+y+z$ |
| Step 3 | \% Composition | $\mathrm{p} /(\mathrm{p}+\mathrm{q}+\mathrm{r}) \times 100$ | $\mathrm{q} /(\mathrm{p}+\mathrm{q}+\mathrm{r}) \times 100$ | $r /(p+q+r) \times 100$ |  |
| Step 4 | Ar | $\left.\mathrm{Ar}_{\mathrm{r}} \mathrm{X}\right]$ | $\left.\mathrm{Ar}_{\mathrm{r}} \mathrm{Y}\right]$ | $\mathrm{A}_{\mathrm{r}}[\mathrm{Z}]$ |  |
| Step 5 | Divide step 2 value for each element by its $A_{r}$ | Step 2 value/ $\mathrm{Ar}_{\mathrm{r}}[\mathrm{X}]$ | Step 2 value/ $\mathrm{Ar}_{\mathrm{r}}[\mathrm{Y}]$ | Step 2 value/ $\mathrm{Ar}_{\text {r }}[\mathrm{Z}]$ |  |
| Step 6 | Divide Step 4 answer by the lowest step 4 value | Step 4 value/Lowest Step 4 value = a | Step 4 value/Lowest Step 4 value = b | Step 4 value/Lowest Step 4 value = c |  |
| Step 7 | Empirical Formula | $\mathrm{Xa}_{\mathrm{a}} \mathrm{Y}_{\mathrm{b}} \mathrm{Z}_{\mathrm{c}}$ |  |  |  |

## Answer:

A compound of was found to contain 4 g of mercury and 0.64 g of sulfur. What is

| Step 1 |  | Hg | S | Total |
| :--- | :--- | :---: | :---: | :---: |
| Step 2 | Mass | 4 | 0.64 | 4.64 |
| Step 3 | $\%$ composition | $4 / 4.64 \times 100=86.2$ | $0.64 / 4.64 \times 100=13.8$ |  |

Step 4
Step 5
Step 6
Step 7

| $\mathrm{A}_{r}$ | 200.6 | 32 |  |
| :--- | :---: | :---: | :---: |
| $\%$ composition $/ \mathrm{A}_{r}$ | $86.2 / 200.6 \times 100=0.43$ | $13.8 / 32 \times 100=0.43$ |  |
| Ratio | $0.43 / 0.43=1$ | $0.43 / 0.43=1$ |  |
| Empirical Formula | $\mathbf{H g S}$ |  |  |

## Molecular Formula from Empirical Formula

Step 1: Calculate the relative empirical formula mass.

Step 2: Divide the relative molecular formula mass by relative empirical formula mass. You should get a whole number ( $n$ ).

Step 3: Multiply each of the subscripts within the empirical formula by the number calculated (n) in Step 2 to obtain the molecular formula.

Example: Naphthalene is a carbon and hydrogen containing compound often used in moth balls. The empirical formula is $\mathrm{C}_{5} \mathrm{H}_{4}$ and its molar mass is $128.16 \mathrm{~g} / \mathrm{mol}$. Find its molecular formula.

Step 1: Empirical Formula Mass $=(12 \times 5)+(1 \times 4)=74$

Step 2: $n=$ Molecular Formula Mass/Empirical Formula Mass $=128 / 74=2$

Step 3: Molecular Formula $=2 \times$ empirical formula $=\mathrm{C}_{(5 \times 2)} \mathrm{H}_{(4 \times 2)}$

$$
=\mathrm{C}_{10} \mathrm{H}_{8}
$$

Example: A compound containing 40.0\% carbon, 5.7\% hydrogen and 53.3\% oxygen has an atomic mass of $175 \mathrm{~g} / \mathrm{mol}$. What is the molecular formula?

| Step 1 |  | C | H | O |
| :--- | :--- | :---: | :---: | :---: |
| Step 2 | \% composition | 40 | 5.7 | 53.3 |
| Step 3 | $\mathrm{A}_{\mathrm{r}}$ | 12 | 1 | 16 |
| Step 4 | \% composition/ $\mathrm{A}_{\mathrm{r}}$ | $40 / 12$ | $5.7 / 1$ | $53.3 / 16$ |
| Step 5 | Ratio | 3.33 | 5.7 | 3.33 |
|  |  | 1 | 1.67 | 1 |
| Step 6 | Empirical Formula |  |  |  |

## ? Practice Problems

1. What is the empirical formula of the following compounds?
a. $\mathrm{C}_{6} \mathrm{H}_{6}$
b. $\mathrm{C}_{8} \mathrm{H}_{18}$
c. $\mathrm{CO}_{2}$
d. $\mathrm{C}_{2} \mathrm{H}_{6} \mathrm{O}_{2}$
e. $\mathrm{X}_{39} \mathrm{Y}_{13}$
2. A 15.0 g sample of a compound was found to contain 8.83 g sodium and 6.17 g sulfur. Calculate the empirical formula of this compound.
3. Analysis of a 10.150 g sample of a compound known to contain only phosphorus and oxygen indicates a phosphorus content of a 4.433g. What is the empirical formula of this compound.
4. A sample of an oxide of arsenic is found to contain $75.74 \%$ arsenic. What is its empirical formula?
5. What is the empirical formula for a compound containing $26.57 \%$ potassium, $35.36 \%$ chromium, and $38.07 \%$ oxygen?
6. What is the empirical and molecular formulas of Ibuprofen which has a mass composition of $75.69 \% \mathrm{C}, 8.80 \% \mathrm{H}$ and $15.51 \% \mathrm{O}$ and the molecular mass is approximately $206 \mathrm{~g} / \mathrm{mol} . \mathrm{C}_{13} \mathrm{H}_{18} \mathrm{O}_{2}$.
7. Epsom salts, a strong laxative used in veterinary medicine, is a hydrate. The formula for Epsom salts can be written as $\mathrm{MgSO}_{4} \cdot \times \mathrm{H}_{2} \mathrm{O}$, where x indicates the moles of water for every mole of magnesium sulfate. When 5.061 g of this hydrate is heated to $250^{\circ} \mathrm{C}$, all the water of hydration is lost, leaving 2.472 g of $\mathrm{MgSO}_{4}$. What is the value of $x$ ?
8. When 2.5000 g of an oxide of mercury, (HgxOy) is decomposed into the elements by heating, 2.405 g of mercury are produced. Calculate the empirical formula.
9. The compound benzamide has the following percent composition. What is the empirical formula?
$\mathrm{C}=69.40$ \% $\mathrm{H}=5.825 \% \mathrm{O}=13.21 \% \mathrm{~N}=11.57 \%$
10. Nicotine, an alkaloid in the nightshade family of plants that is mainly responsible for the addictive nature of cigarettes, contains $74.02 \%$ C, $8.710 \% \mathrm{H}$, and $17.27 \%$ N . If 40.57 g of nicotine contains 0.2500 mole nicotine, what is the molecular formula?

## Answers are given on the next page.

## ? Practice Problem Answers

1. What is the empirical formula of the following compounds?
a. $\mathrm{C}_{6} \mathrm{H}_{6}$

| Step 1 | Write down chemical formula subscripts | 6,6 |
| :--- | :--- | :--- |
| Step 2 | Identify the largest common factor | 6 |
| Step | Divide subscripts by the largest common <br> factor | $\mathrm{C}_{6 / 6} \mathrm{H}_{6 / 6}$ |
| Step 4 | Write down the empirical formula | Empirical Formula: $\mathbf{C H}$ |

b. $\mathrm{C}_{8} \mathrm{H}_{18}$

| Step 1 | Write down chemical formula subscripts | 8,18 |
| :--- | :--- | :--- |
| Step 2 | Identify the largest common factor | 2 |
| Step 3 | Divide subscripts by the largest common <br> factor | $\mathrm{C}_{8 / 2} \mathrm{H}_{18 / 2}$ |
| Step 4 | Write down the empirical formula | Empirical Formula: $\mathbf{C}_{4} \mathbf{H}_{9}$ |

C. $\mathrm{CO}_{2}$

| Step 1 | Write down chemical formula subscripts | 1,2 |
| :--- | :--- | :--- |
| Step 2 | Identify the largest common factor | 1 |
| Step 3 | Divide subscripts by the largest common <br> factor | $\mathrm{C}_{1 / 1} \mathrm{O}_{2 / 1}$ |
| Step 4 | Write down the empirical formula | Empirical Formula: $\mathbf{C O}_{\mathbf{2}}$ |

d. $\mathrm{C}_{2} \mathrm{H}_{6} \mathrm{O}_{2}$

| Step 1 | Write down chemical formula subscripts | $2,6,2$ |
| :--- | :--- | :--- |
| Step 2 <br> Step 3 | Identify the largest common factor <br> Divide subscripts by the largest common <br> factor | 2 |
| Step 4 | Write down the empirical formula | Empirical Formula: $\mathbf{C H}_{3} \mathbf{O}$ |

e. $X_{39} Y_{13}$

| Step 1 | Write down chemical formula subscripts | 13,29 |
| :--- | :--- | :--- |
| Step 2 | Identify the largest common factor | 13 |
| Step | Divide subscripts by the largest common <br> factor | $X_{39 / 13} \mathrm{Y}_{13 / 13}$ |
| Step 4 | Write down the empirical formula | Empirical Formula: $\mathbf{X}_{\mathbf{3}} \mathbf{Y}$ |

2. A 15.0 g sample of a compound was found to contain 8.83 g sodium and 6.17 g sulfur. Calculate the empirical formula of this compound.

Answer

| Step 1 |  | Na | S | Total |
| :--- | :--- | :---: | :---: | :---: |
| Step 2 | Mass | 8.83 | 6.17 | 15.0 |
| Step 3 | $\%$ composition | $8.83 / 15 \times 100=58.9$ | $6.17 / 15 \times 100=41.1$ |  |
| Step 4 | $\mathrm{A}_{r}$ | 23 | 32 |  |
| Step 5 | $\%$ composition $/ \mathrm{A}_{r}$ | $58.9 / 23$ | $41.1 / 32$ |  |

$\left.\begin{array}{|l|l|c|c|c|}\hline \text { Step 6 } & \text { Ratio } & 2.56 & 1.28 & 1\end{array}\right]$
3. Analysis of a 10.150 g sample of a compound known to contain only phosphorus and oxygen indicates a phosphorus content of a 4.433g. What is the empirical formula of this compound.

| Step 1 |  | $P$ | 0 | Total |
| :--- | :--- | :---: | :---: | :---: |
| Step 2 | Mass | 4.433 | $10.15-4.433=5.717$ | 10.15 |
| Step 3 | $\%$ composition | $4.433 / 10.15 \times 100=$ | $5.717 / 10.15 \times 100=$ |  |
|  |  | 43.7 | 56.3 |  |
| Step 4 | $\mathrm{Ar}_{r}$ | 31 | 16 |  |
| Step 5 | $\%$ composition $/ \mathrm{A}_{\mathrm{r}}$ | $43.7 / 31=1.4$ | $56.3 / 16=3.52$ |  |
| Step 6 | Ratio | 1 | 2.5 |  |
|  |  | 2 | 5 |  |
| Step 7 | Empirical Formula | $\mathbf{P}_{\mathbf{2}} \mathbf{O}_{\mathbf{5}}$ |  |  |

4. A sample of an oxide of arsenic is found to contain $75.74 \%$ arsenic. What is its empirical formula?

| Step 1 |  | As | O |
| :--- | :---: | :---: | :---: |
| Step 2 | \% composition | 75.74 | $100-75.74=24.26$ |
| Step 3 | $\mathrm{A}_{\mathrm{r}}$ | 75 | 16 |
| Step 4 | \% composition/Ar | $75.74 / 75=1$ | $24.26 / 16 \times 100=1.5$ |
| Step 5 | Ratio | 1 | 1.5 |
|  |  | 2 | 3 |
| Step 6 | Empirical Formula | As2O3 |  |

5. What is the empirical formula for a compound containing $26.57 \%$ potassium, $35.36 \%$ chromium, and $38.07 \%$ oxygen?

| Step 1 |  | K | Cr | O |
| :--- | :--- | :---: | :---: | :---: |
| Step 2 | \% composition | 26.57 | 35.36 | 38.07 |
| Step 3 | $\mathrm{A}_{\mathrm{r}}$ | 39 | 52 | 16 |
| Step 4 | \% composition/ $\mathrm{A}_{\mathrm{r}}$ | $26.57 / 39=0.68$ | $35.36 / 52=0.68$ | $38.07 / 16=2.38$ |
| Step 5 | Ratio | 1 | 1 | 4 |
| Step 6 | Empirical <br> Formula | $\mathbf{K C r O}_{\mathbf{4}}$ |  |  |

6. What is the empirical and molecular formulas of Ibuprofen which has a mass composition of $75.69 \% \mathrm{C}, 8.80 \% \mathrm{H}$ and $15.51 \% \mathrm{O}$ and the molecular mass is approximately $206 \mathrm{~g} / \mathrm{mol}$.

| Step 1 |  | C | H | O |
| :--- | :---: | :---: | :---: | :---: |
| Step 2 | \% composition | 75.69 | 8.8 | 15.51 |
| Step 3 | $\mathrm{A}_{r}$ | 12 | 1 | 16 |
| Step 4 | \% composition $/ \mathrm{A}_{\mathrm{r}}$ | 6.3 | 8.8 | 0.97 |

| Step 5 | Ratio | 6.5 | 9 | 1 |
| :--- | :---: | :---: | :---: | :---: |
|  |  | 13 | 18 | 2 |
| Step 6 | Empirical | $\mathrm{C}_{13} \mathrm{H}_{18} \mathbf{O}_{\mathbf{2}}$ |  |  |
|  | Formula |  |  |  |

$\operatorname{RFM}\left[\mathrm{C}_{13} \mathrm{H}_{18} \mathrm{O}_{2}\right]=206$
7. Epsom salts, a strong laxative used in veterinary medicine, is a hydrate. The formula for Epsom salts can be written as $\mathrm{MgSO}_{4} \cdot x \mathrm{H}_{2} \mathrm{O}$, where x indicates the moles of water for every mole of magnesium sulfate. When 5.061 g of this hydrate is heated to $250^{\circ} \mathrm{C}$, all the water of hydration is lost, leaving 2.472 g of $\mathrm{MgSO}_{4}$. What is the value of $x$ ?

| Step $1 \times \mathrm{MgSO}_{4} \mathrm{XH}_{2} \mathrm{O}$ |  | $\mathrm{MgSO}_{4}+\mathrm{xH}_{2} \mathrm{O}$ |  |  |
